

Anticipating **CAT 8**

Plan for
25/40GBASE-T
networks today

with
FLUKE
networks®

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Anticipating Cat 8 - Agenda

- Cat 8 Overview
- Cat 8 Customer
- Design Considerations
- Testing Procedures and Standards

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

What is Cat 8?

- Next Generation Copper Cabling
- 25G and 40G data rates over twisted-pair copper cabling
- Switch to server connections at data center edge

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Category 8 Standards

IEEE 802.3bq
25G/40GBASE-T

ANSI/TIA-568-C.2-1 Category 8 Cabling
Soon to be part of ANSI/TIA-568.2-D

International
Organization for
Standardization

ISO/IEC 11803-1 Generic Cabling
Including Class I & II Channels

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

How is Cat 8 Different from Lower Categories?

- Frequency
- Channel Length
- Number of Connections
- Cable Construction
- Connector Options

Cat 8
Class I & II

Cat 5e, 6, 6A
Class D, E, E_A, F_A

**2018 BICSI WINTER
CONFERENCE & EXHIBITION
Orlando, FL | February 4-8**

Frequency - Category 8 operates at 2 GHz, more than 4 x Cat 6A

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Channel Length - Category 8 channels are limited to 30 meters

Category 8 | Class I & II

Category 5e,6,6A,7A | Class D, E, E_A, F_A

- Previous twisted-pair horizontal cabling = 100 meter limit
- Cat 8 = 30 meter limit
- New limit due to optimizing distance and power for active equipment
- Short for many building applications, but works well for data center rows
- 30 meter limit for Cat 8 applies whether inside or outside data center

**2018 BICSI WINTER
CONFERENCE & EXHIBITION
Orlando, FL | February 4-8**

Cat 8 Channels - Limited to 2 connections

Why is the connector limit important?

- Cat 8 **requires** interconnect topologies,
- Cat 8 **does not support** cross connect topologies

Category 8
Class I & II
(2 connections)

Category 5e,6,6A,7A
Class D,E,E_A,F_A
(4 connections)

2018 BICSI WINTER
CONFERENCE & EXHIBITION
Orlando, FL | February 4-8

Cable Construction

Category 8 Cable is Shielded with 22 AWG Conductors

- 2 GHz frequency requires high level of shielding
- S/FTP Construction – Pairs in metal foil with overall braid
- Cat 8 solutions require shielded panels that are properly bonded to the telecommunications bonding network

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Connector Options

Four Possible Cat 8 Connectors

Cat 8.1 / Class I

Cat 8.2 / Class II (Cat 7A interface)

RJ-45

TIA 568-C.2-1
ISO/IEC 11801-1

Tera[®]

IEC 61076-3-104

GG45

IEC 60603-7-71

ARJ

IEC 61076-3-110

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Cat 8 Architecture Options

End-of-Row | Middle-of-Row

EoR

MoR

Top-of-Rack

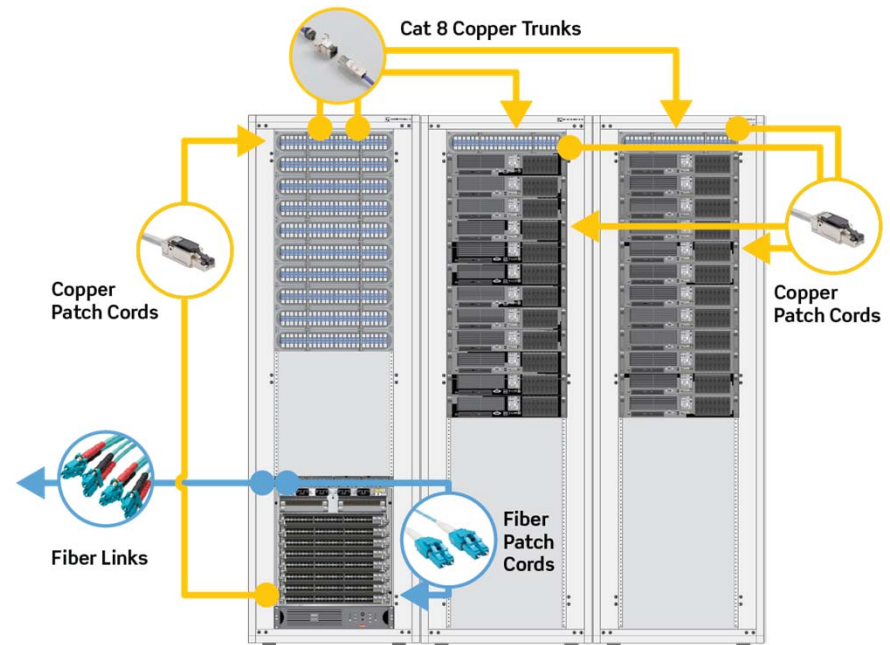

ToR

**2018 BICSI WINTER
CONFERENCE & EXHIBITION
Orlando, FL | February 4-8**

End-of-Row | Middle-of-Row Architecture

- Structured cabling approach
- Patch cords connect active equipment to panels
- Jack-Jack links with patch cord on each end
- Fiber uplinks to core / aggregate switches

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Top-of-Rack Architecture

- Not structured cabling, but common in data centers
- Connects equipment within same or adjacent cabinet
- Fiber uplinks to core /aggregate switches
- Active equipment connected directly with single cable
 - DAC = Direct Attached Copper

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Category 8 Application Advantages

Compared to OM3 Multimode Optical Fiber

- Lower cost alternative for channels less than 30m
- Backwards compatibility with Cat 6A and Cat 6
- Supports auto-negotiation
- Enables mixed data rates on the same switch

**2018 BICSI WINTER
CONFERENCE & EXHIBITION
Orlando, FL | February 4-8**

Category 8 Application Advantages

Compared to Twin-Axial Copper

- Lower cost alternative for Direct Attached Copper (DAC) applications of 5 meters or less
- Supports connections within same or adjacent cabinets
- Backwards compatibility with RJ-45 equipment
- Supports auto-negotiation
- Enables mixed data rates on the same switch

**2018 BICSI WINTER
CONFERENCE & EXHIBITION
Orlando, FL | February 4-8**

Who Is The Cat 8 Customer?

Anticipating Cat 8

**2018 BICSI WINTER
CONFERENCE & EXHIBITION
Orlando, FL | February 4-8**

Cat 8 is Ideal for Small/Medium Data Centers

- Data centers under 20K m² (~ 140m x 140m)
- On-site or Co-location
 - Essentially a collection of small/med data centers housed together
- Rows of 30 cabinets or less
- Seeking 25G upgrade from 10G or 1G at the edge

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Cat 8 May Not Support Large Data Center Needs

- Longer rows with 30 to 100 cabinets
- Data rates already at 40G
- Looking for migration to 100G and higher
- OM3 or OM4 optical fiber likely to be deployed

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Cat 8 Will Not Support Hyperscale Data Centers

- Hyperscale data centers require single-mode fiber
- Very long rows with cabling distances over 100 meters
- Data rates of 100G now with upgrade paths to 200G / 400G

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Increased Traffic Throughout Network Driving Bandwidth Needs in Data Center

- High bandwidth applications
 - Big increase in connected devices (IoT, BYOD, etc.)
 - Cloud applications
 - Increased use of 802.11ac WAPs
 - 7GB per link vs. less than 1GB
- Fiber uplinks migrating from 40G to 100G or higher
- Access layer requires more than 10G to avoid becoming the bottleneck

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Cat 8 Outside the Data Center

- 30-meter, 2-connection channel limits still apply
- Cat 8 can support 10G in 100-meter channels
- ISO/IEC standards limit Cat 8 to the data center
- TIA includes Cat 8 in most premise cabling standards, though **Cat 6A is still recommended**
 - ANSI/TIA-568.0-D-----Generic Cabling Systems
 - ANSI/ITA-568.1-D-----Commercial Buildings
 - ANSI/TIA-862-B-----Intelligent Building Systems
 - ANSI/TIA-4966-----Education
 - ANSI/TIA-942-B-----Data Centers

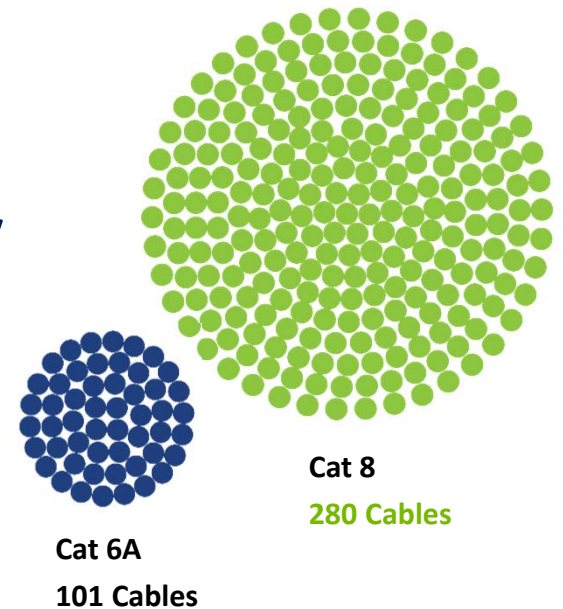

**2018 BICSI WINTER
CONFERENCE & EXHIBITION
Orlando, FL | February 4-8**

Cat 8 PoE Benefits

Larger Conductors Transmit Power More Efficiently

- POE Advantages of Cat 8 Cable
 - More cables can be bundled for extended distances
 - Ambient temperature can exceed 20 °C
 - Support future applications where all cables to support 100 W
- 10 Gb/s is still the maximum data rate when
 - Distances exceed 30 meters
 - More than 2 connections used
 - Cat 6A jacks or patch cords used

TIA-TSB-184-A

Maximum bundle size **in air** for 15 °C temperature rise at 20 °C ambient for 100W (1000 mA per pair)

**2018 BICSI WINTER
CONFERENCE & EXHIBITION
Orlando, FL | February 4-8**

Design Considerations for 25G

Anticipating Cat 8

**2018 BICSI WINTER
CONFERENCE & EXHIBITION
Orlando, FL | February 4-8**

Selecting the Right Media for 25G

Design Considerations

- New construction or existing facility
- Distance requirements
- Architecture type
- Sequence and timing of installation
- Future-proofing Cat 6A designs

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Design Considerations for 25G

New Construction or Existing Facility

- All new equipment → **Cat 8** | OM3 fiber | Twin-axial
- Must match current architecture
- New equipment must co-exist with current equipment
 - 10GBASE-T (Cat 6A) → 25GBASE-T (**Cat 8** Class I)
 - 1GBASE-T (Cat 6) → 25GBASE-T (**Cat 8** Class I)
 - 10GBASE-CR (Twin-axial) → 25GBASE-CR (Twin-axial)
 - 10GBASE-SR (OM3 fiber) → 25GBASE-SR (OM3 fiber)

**2018 BICSI WINTER
CONFERENCE & EXHIBITION
Orlando, FL | February 4-8**

Design Considerations for 25G

Distance Requirements

| Distance | OM3 Fiber | Cat 8 | Twin-Axial |
|--------------|-----------|-------|------------|
| Less than 5m | ✓ | ✓ | ✓ |
| 5m to 30m | ✓ | ✓ | |
| 30m to 100m | ✓ | | |

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Design Considerations for 25G

Architecture Type

- End-of-Row | Middle-of-Row Architecture

 Less than 30m

– **Cat 8** | OM3 Fiber

 Greater than 30m

OM3 Fiber

- Top-of-Rack

– RJ-45  **Cat 8**

– SFP28 Connector  Twin-axial

– Greater than 5m  Cannot use ToR architecture

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Design Considerations for 25G

Sequence and Timing of Installation

- Concurrent Installation
 - All equipment, cabling installed together → **Cat 8** | OM3 fiber | Twin-axial
- Staggered Installation
 - Upgrade switches first, then servers over time
 - Match existing cabling type
 - Cat 6A or 6 (RJ-45) → **Cat 8 Class I (RJ-45)**
 - OM3 fiber (SFP+ & LC) → Keep OM3 cabling | upgrade transceiver
 - Twin-axial (SFP+) → Twin-axial (SPF28)

**2018 BICSI WINTER
CONFERENCE & EXHIBITION
Orlando, FL | February 4-8**

Future-Proofing Cat 6A Designs

Cabling Architectures

- Top-of-Rack Architecture
 - Connections should be supported by cords 5 meters or shorter
 - Connections within same or adjacent cabinets

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Future-Proofing Cat 6A Designs

Cabling Architectures

- Middle-of-Row Architecture
 - End-of-Row may place server too far away from switch
 - Middle-of-Row provides 60m of distance with 30 meters in each direction

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Future-Proofing Cat 6A Designs

Install a Shielded Solution

- Shielded panels accept both Cat 6A and Cat 8 jacks
- If Cat 6A unshielded cabling is installed, consider using shielded panels
- Panels will be bonded to cabinets as part of telecommunication bonding network

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Cat 8 Testing Procedures and Standards

Anticipating Cat 8

**2018 BICSI WINTER
CONFERENCE & EXHIBITION
Orlando, FL | February 4-8**

Field Test Standard ANSI/TIA-1152-A

- References related standards – such as ANSI/TIA-568-C.2
- What Tests Shall be run in the field
 - And Optional Tests
- How to run the tests
- What the accuracy requirements are for the tests
 - Comparing the field test equipment results with a Lab equipment (VNA)
 - Specification of Level 2G accuracy
- Field Test Standard ANSI/TIA-1152-A

**2018 BICSI WINTER
CONFERENCE & EXHIBITION
Orlando, FL | February 4-8**

It's Not Just About 2 GHz

| Copper Certification | | |
|-------------------------|--------------------------------------|---------------------------------------|
| | ANSI/TIA-568-C.2 (Cabling System) | ANSI/TIA-1152 (Minimum Field Test) |
| Wire Map | ✓ | ✓ |
| Length | ✓ | ✓ |
| Propagation Delay | ✓ | ✓ |
| Delay Skew | ✓ | ✓ |
| DC Loop Resistance | ✓ | |
| DC Resistance Unbalance | ✓ | |
| Insertion Loss | ✓ | ✓ |
| NEXT, PS NEXT | ✓ | ✓ |
| Return Loss | ✓ | ✓ |
| ACR-F, PS ACR-F | ✓ | ✓ |
| TCL, ELTCTL | ✓ | |
| PS ANEXT, PS AACR-F | ✓ | ✓ |

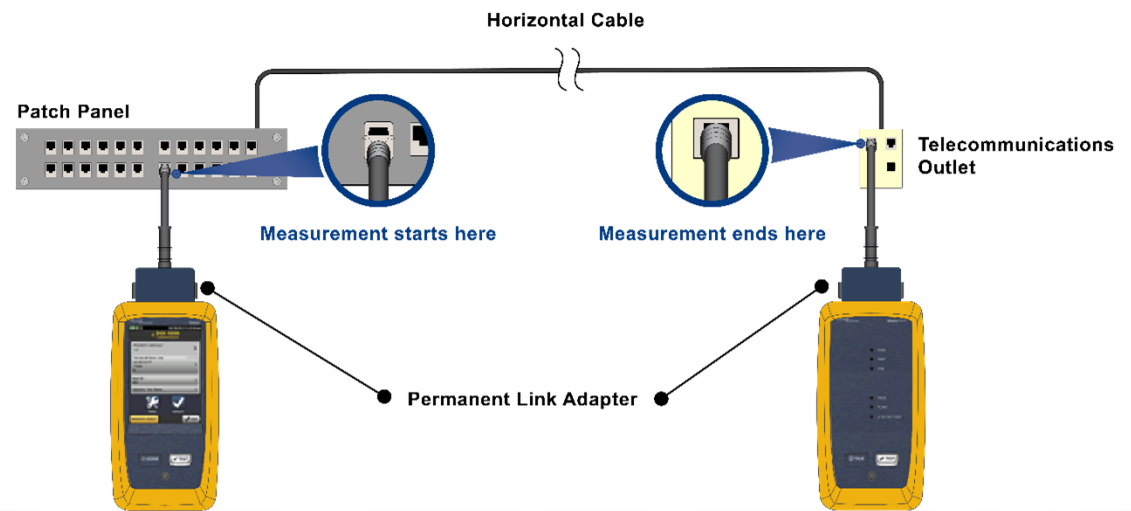

Limits are specified but optional per 1152A

For Category 6A

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Permanent Link

- Typically used by installers – required for cabling warranties
- Max. 24 m (78 ft.)

**2018 BICSI WINTER
CONFERENCE & EXHIBITION
Orlando, FL | February 4-8**

Inter-Connect Channel

- Only two Connection Points permitted
- Equipment and user cords must remain with link
- No cross-connect or consolidation point, max. 30 m (98 ft.)

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Why 'Only' 30 Meters...

Attenuation

is represented by the electrons that get stuck

Fewer electrons show up!

2018 BICSI WINTER
CONFERENCE & EXHIBITION
Orlando, FL | February 4-8

Attenuation/Insertion Loss Increases with Distance and Frequency

Attenuation on a shorter (20 meter) link

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Attenuation/Insertion Loss Increases with Distance and Frequency

Attenuation on a longer (90 meter) link

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Cat 8 Attenuation Example of a 90 Meter Channel

Results should be below the limit line

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Cat 8 Attenuation Example of a 30 Meter Channel

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Cat 8 Limits are Similar to Cat 6A

Extended out to 2 GHz

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Shield Integrity Testing

Proper Shield Termination is Critical to Cat 8 Performance

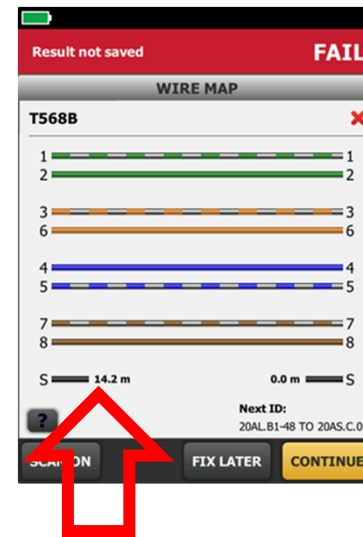

2018 BICSI WINTER
CONFERENCE & EXHIBITION
Orlando, FL | February 4-8

New Technology Required for Path Testing

Older Testers' Simple Resistance Test

Test of Shield Path And simple resistance

2018 BICSI WINTER
CONFERENCE & EXHIBITION
Orlando, FL | February 4-8

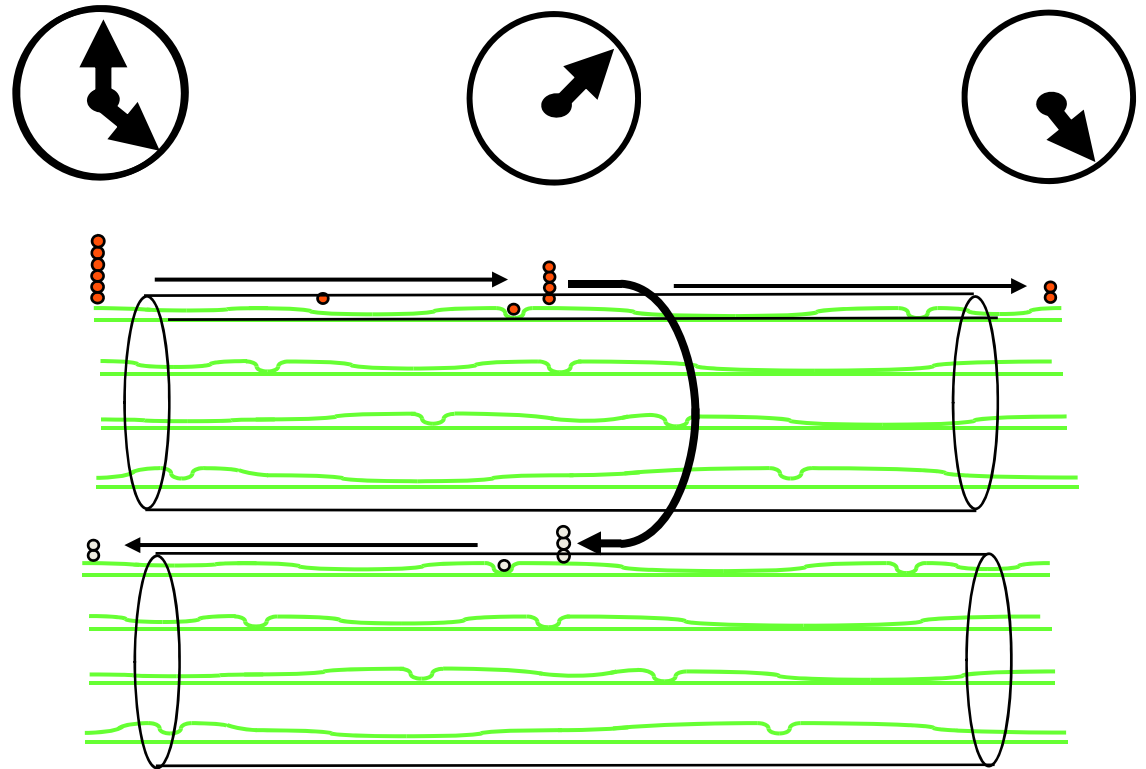

Shield Integrity Testing

- Common Ground Can “Fool” Tester
- Tester Must Verify “Along the Path of the Shield”

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Alien Crosstalk Occurs Between Cables

**2018 BICSI WINTER
CONFERENCE & EXHIBITION**
Orlando, FL | February 4-8

Alien Crosstalk Occurs Between Cables

2018 BICSI WINTER
CONFERENCE & EXHIBITION
Orlando, FL | February 4-8

Results of Poor Shield Termination

It is important to check that the shield has continuity along the path of the cable – here the Disturbed cable has its shield open on one end
